LOW NOISE DC VOLTAGE SOURCE

LP6016-01

INSTRUCTION MANUAL

NF Corporation
LOW NOISE DC VOLTAGE SOURCE

LP6016-01

INSTRUCTION MANUAL
----- Preface ----- 

Thank you for purchasing the "LP6016-01 LOW NOISE DC VOLTAGE SOURCE". 
For safe and correct use of this product, please read the following “Safety Precautions” section before attempting to use this product.

■ Marks and symbols 
For safe operation and prevent damage to this product, please note the following marks and symbols that are used in this manual.

⚠ WARNING 
This mark indicates information for preventing the possibility of death or serious personal injury from electrical shock or other hazards or damage to this product when using or handling it.

⚠ CAUTION 
This mark indicates information for preventing the possibility of injury to the user or damage to this product when handling it.

■ The chapter structure of this manual is described below. 
If you are using this product for the first time, begin reading from Chapter 1.

1. Outline 
This chapter gives an overview and describes the features and simple operation principles of this product.

2. Preparation before use 
This chapter describes important preparation before installation and operation.

3. Explanations of the panel 
This chapter explains the names and functions of each part on the panel. Please read it while operating this product.

4. Operation procedure 
This chapter explains the functions and operating procedure of each part on the panel. Please read it while operating this product.

5. Remote control 
This chapter explains remote control with each interface.

6. Troubleshooting 
This chapter describes how to handle error messages and cases in which you think the product is malfunctioning.

7. Maintenance 
This chapter explains maintenance, repacking, transportation, and performance-testing methods.

8. Specifications 
This chapter describes the product specifications (functions and performance).

9. Typical data 
This chapter describes the typical data of the major specification items.
----- Safety Precautions -----  

For safe use of this product, be sure to comply with the following warnings and cautions.
NF Corporation shall not be held liable for damages that arise from failure to obey these warnings and cautions.

This product is a Class I equipment (with protective conductor terminal) that conforms to the JIS and IEC standards.

■ Ensure that you comply with the instructions in this instruction manual
   This instruction manual contains information for the safe operation and use of this product.
   Please read this manual before using this product.
   All the warning items contained in this instruction manual are intended for preventing risks that may lead to serious accidents. Ensure that you comply with them.

■ Ensure that this product is grounded
   There is risk of electrical shock if this product is not grounded.
   To prevent electrical shock accidents, connect this product to an earth ground so that ground resistance is 100 Ω or less.
   This product is automatically grounded by connecting a 3-pole power plug to a power outlet with a protective ground contact.
   This product does not come with a 3-pole to 2-pole conversion adapter.
   If you must use a 3-pole to 2-pole conversion adapter, be sure to connect the ground line of the adapter to a suitable ground near the power outlet.

■ Check the power supply voltage
   This product operates on the power supply voltage described in "2.3 Grounding and Power Connections".
   This product has a power-supply-voltage-select function. Before connecting to the outlet, check that the set power supply voltage matches the voltage of the outlet.

■ Observe the rating of the fuse
   Failure to do so may cause fire or other accidents. Use a fuse with the rating specified in "2.3 Grounding and Power Connections".
   When replacing the fuse, be sure to disconnect the power plug from the outlet.

■ If you notice something wrong
   If smoke, an unusual odor, or sound comes from this product, immediately remove the power cord from the outlet and cease use.
   If any such abnormality occurs, take measures to prevent the use of this product and promptly contact NF Corporation or an authorized agent. Never use it until the repair is completed.
■ Do not use in an explosive atmosphere
   This may cause an explosion.

■ Do not open the case of this product
   To prevent exposure to high voltages, never open the case of this product.
   Even when inspection inside of this product is needed, only service engineers certified by NF Corporation should touch the inside.

■ Do not modify this product
   Never modify this product in any way. Modification might create new risks. NF Corporation may refuse to service the product if it has an unauthorized modification.

■ Do not expose this product to water
   When this product is used under wet conditions, it may cause an electric shock or fire.
   If this product becomes wet, immediately disconnect the power plug from the outlet and contact NF Corporation or an authorized agent.

■ If lightning occurs nearby, turn off the power switch and disconnect the power plug
   Lightning strikes may cause electric shock, fire, or product malfunction.

■ Safety-related symbols
   The marks and codes defined below are used in this manual or on this product to indicate safety information or instructions.

⚠ Instruction manual reference symbol
   This notifies the user of a potential hazard and indicates that the user must refer to the instruction manual.

⚠ Electric shock danger symbol
   This indicates a location that presents a risk of electric shock under specific conditions.

⚠ WARNING
   Warning symbol
   This contains information to avoid risks when handling this product that could result in the death or serious injury of the user.

⚠ CAUTION
   Caution symbol
   This contains information to avoid risks when handling this product that could result in minor or moderate injury of the user or damage to property.
Other symbols

- Indicates the "ON" position of the power switch.
- Indicates the "OFF" position of the power switch.
- Indicates that it is connected to the product enclosure (ground).
- Indicates that it is connected to the output common (COM).
- Indicates that it is isolated from the product enclosure (ground).
- However, safe operation of this product requires that the potential difference from the ground is restricted to 42 Vpk or less.

Electromagnetic compatibility

This product is a CISPR 11 Group 1 Class A compliant instrument. It should not be used outside industrial environments. Use of this product in ordinary office or residential areas may result in electromagnetic interference with other devices.

Regarding disposal

Pay attention to the following contents when disposing of this product for environmental conservation.

a) Dispose this product through a dealer handling industrial waste.

b) This product does not contain batteries.

c) This product does not contain mercury.

1. Outline

1.1 Overview........................................................................................................... 1-2
1.2 Features ............................................................................................................. 1-2
1.3 Operation principles........................................................................................ 1-2
1.4 Block diagram................................................................................................... 1-3
1.1 Overview

“LP6016-01” is a LOW NOISE DC VOLTAGE SOURCE that achieves output noise of 10 μVrms or lower (Bandwidth: 10 Hz to 20 MHz) and output voltage stability of ±10 ppm/°C.

It has both positive and negative voltage outputs. The output voltage can be adjusted in the range of 0 to ±16.1 V by manual operation or remote PC control. The maximum output current is ±100 mA.

1.2 Features

(1) The output noise is ultra low with 10 μVrms or lower (Bandwidth: 10 Hz to 20 MHz).
(2) The output voltage stability is ±10 ppm/°C or lower.
(3) High accuracy voltage setting with ±(0.03% of setting ± 250 μV) is available.
(4) Three types of remote interfaces are selectable (USB, RS-232, and LAN). And measurement system can be configured.
(5) The output section is isolated from the chassis (±42 Vpk) to prevent GND loop generation.
(6) The power supply voltage can be selected from AC 100, 120, 220, and 240 V by using the VOLTAGE SELECTOR switch on the rear panel.
(7) The output current can be measured using current-monitor outputs.

1.3 Operation principles

This product is constructed with an analog system using a power transformer, series regulator, and so on, so switching noise does not exist. It consists of a voltage reference and amplifier circuit with low noise and high stability, and the output voltage is controlled by changing the reference voltage with the D/A converter.

Although it includes a digital circuit, such as an D/A converter, and a circuit of remote control, insulation and shield are designed so that noise caused by them are not superimposed on the output.

2.4.1 Check operation at power on.......................................................................................2-16
2.4.2 Check the output voltage...............................................................................................2-17
2.1 Checking before use

■ Safety check
To ensure safe use, read the following sections of this instruction manual.
● “Safety Precautions” (at the beginning of this instruction manual)
● “2.3 Grounding and Power Connections”

■ Check the appearance and accessories
If there is an abnormal appearance (scratches, dents, etc.) on the outside of the cardboard box, check whether this product is affected when removing the product from the box.
When you have removed the contents from the packing box, check their condition.
If you find a scratch on this product or an accessory is missing, contact NF Corporation or an authorized agent.

● Appearance check
Check that there are no scratches or dents on the panel surfaces, connectors, etc.

● Product configuration check
The following shows the product configuration. Check that the quantities are correct and there are no scratches.

- **LP6016-01 Main unit** ................................................................. 1
- **Accessories**
  - Instruction manual ................................................................. 1
  - Power cord set (2 m, 3-pole) .................................................. 1
  - Fuse (spare) ........................................................................... 1
- **Options**
  - PA-001-3089: BNC - Binding post conversion adaptor
  - PA-001-3230: Rack mount kit (EIA, for 1 unit)
  - PA-001-3090: Rack mount kit (EIA, for 2 units)
  - PA-001-3231: Rack mount kit (JIS, for 1 unit)
  - PA-001-3091: Rack mount kit (JIS, for 2 units)

---

**WARNING**
To prevent exposure to high voltages, never open the case of this product.
Even when inspection inside this product is needed, only service engineers certified by NF Corporation should touch the inside.
2.2 Installation

2.2.1 General cautions

- If you use it with the back side down or side down, it may fall over. Be sure to install it so that all four rubber feet on the bottom come into contact with a flat surface such as a desk.
- If this product is used in a residential area, it may generate electromagnetic fields and affect other equipment. To prevent interference with reception of radio and television broadcasting, ensure appropriate measures to reduce electromagnetic radiation.
- Avoid using this product in environments where there is strong radio-frequency electromagnetic radiation. When using this product in such environments, the noise performance of this product may temporarily worsen.

2.2.2 Installation environment

- Place this product in a location that satisfies the following conditions.
  Operation: 0 to +50 °C, 5 to 85 %RH (absolute humidity 1 to 25 g/m³, no condensation)
  Storage: -10 to +60 °C, 5 to 95 %RH (absolute humidity 1 to 29 g/m³, no condensation)
- Place the product in a location at an altitude of 2000 m or less.

⚠️ CAUTIONS

Avoid installation in the following locations.

- Where there is flammable gas
  There is a risk of explosion. Never install or use it in such a location.
- Outdoors, where exposed to direct sunlight or near fire or a heat source.
  The performance may not be sufficient or failure may occur.
- Where there are corrosive gases and vapors, a large amount of dust and particles, salty air, oily smoke, metal powder, etc.
  Corrosion or malfunction may occur.
- Where there is a large amount of vibration.
  Malfunction or failure may occur.
- Near an electromagnetic field source, high-voltage equipment, power line, or pulse noise source.
  Malfunction or failure may occur.
2.2.3 Rack mounting

This product can be installed in an IEC or EIA standard rack, or a JIS standard rack by using the appropriate optional rack mounting kit. Rack mounting kits are available for millimeter racks (JIS) and inch racks (EIA).

First, assemble the rack mounting kit as shown in Figure 2-1 to Figure 2-8 then install the product in the rack.

---

**WARNING**

When mounting this product in a rack, be sure to use a rack rail or other means and support the product. Failure to do so, may result in injury to yourself or damage to this product due to it falling.

---

**CAUTIONS**

Provide sufficient ventilation holes in the rack or air cooling with a cooling fan.

If the ambient temperature exceeds the specification, performance may decrease and output may stop due to overheat protection.
2.2 Installation

Remove the rubber feet and screws at the bottom.

2.3 Grounding and Power Connections

■ Ensure that this product is grounded
This product is automatically grounded by connecting a 3-pole power plug to a power outlet with a protective ground contact.
This product does not come with a 3-pole to 2-pole conversion adapter.
If you must use a 3-pole to 2-pole conversion adapter, be sure to connect the ground line of the adapter to a suitable ground near the power outlet.

⚠️ WARNING

There is risk of electrical shock if this product is not grounded.
To prevent electrical shock, connect it to an earth ground so that ground resistance is 100 Ω or less.

■ Power supply specifications
Voltage range: AC 100, 120, 220 or 240 V ±10 %, not to exceed AC 250 V.
Frequency range: 50/60 Hz ±2 Hz
Power consumption: 28 VA or lower
Overvoltage category: II

■ How to switch the power supply voltage
This product has a power supply voltage selector switch on the rear panel.
Check that the voltage of the outlet matches the voltage set with the power supply voltage selector switch.
To select the power supply voltage, disconnect the power cord then slowly turn the selector switch with a coin-driver.

⚠️ CAUTIONS

To prevent the power supply voltage selector switch from being in a half-way position, set the switch to the position to where it clicks.
2.3 Grounding and Power Connections

■ Connecting the power supply

1) Confirm that the power supply voltage to which this product is connected is within the specified voltage range of this product.
2) Set the power switch on the rear panel to the off position.
3) Insert the power cord into the power inlet that is on the rear panel.
4) Plug the power cord into a ground-protected power outlet.

⚠️ CAUTIONS

The power cord set that comes with this product is intended for use only with this product. The power cord set should not be used with any other product or for any other purpose. When connecting this product to the power supply, be sure to use only the power cord that is provided with this product.

■ In an emergency, the power cord can be used to disconnect this product from the power supply.

⚠️ WARNING

Confirm that there is sufficient space around the power inlet of this product to ensure that the power cord can be removed easily. Alternatively, plug the power cord into a power outlet that is easily accessible and has sufficient space around it to allow easy removal of the power plug.
■ Observe the rating of the power fuse.
The following shows the ratings of the power fuse of this product.

100/120 V: Time lag 0.4 A, Rated voltage 250 V, φ 5.2 × 20 mm
220/240 V: Time lag 0.2 A, Rated voltage 250 V, φ 5.2 × 20 mm

■ Replace the fuse
To replace the fuse, disconnect the power cord then turn the fuse holder on the rear panel counterclockwise with a screwdriver and pull it out. Replace the old fuse with a new one, insert the fuse holder, and turn it clockwise with a screwdriver to lock it.

![Fuse holder - front](image1)
![Fuse holder - side](image2)
![Fuse](image3)

Figure 2-9 Appearance of fuse holder and direction of fuse insertion

---

**WARNING**

There is risk of fire or other accidents. Use a fuse of the same rating when replacing the old fuse. Before replacing the fuse, be sure to disconnect the power plug from the outlet.
2.4 Quick operation check

When using this product for the first time or when using it again after a long time, we recommend checking the operation with the following procedure.

Refer to “3. Explanations of the panel” and “4. Operation procedure” for panel operation and various setting methods during operation check.

2.4.1 Check operation at power on

With only the power cord connected to this product, turn on the power switch on the rear panel.

The internal check at startup starts automatically, and a message is displayed on the LCD during this check (about 3 seconds), as shown in Figure 2-10.

![Figure 2-10 LCD example at startup](image)

When the internal check is completed, a message is displayed on the LCD, as shown in Figure 2-11. Check that an error message, "OHP" or "OCP", is not displayed on the LCD.

If such an error message is displayed, refer to “6.1 Error messages” and take appropriate action.

![Figure 2-11 Initial display of LCD example](image)
2.4.2 Check the output voltage

For checking the output voltage, use a DC voltmeter (such as a multimeter).

In this example, check by setting the positive and negative output voltages to +10.0000 V and -10.0000 V. Depending on the output voltage to be used, set the voltage to be checked.

Connect the devices as shown in Figure 2-12. Set the positive and negative output voltages to +10.0000 and -10.0000 V and turn on the output.

Check that the orange LED indicating that the output state is ON is lit. Also check that the voltages measured by the DC voltmeter are about +10 and -10 V.

Figure 2-12 Connection when checking output voltage
(When checking on the negative side, connect with the broken line.)
3. Explanations of the panel

3.1 Name of each part of the panels ......................................................... 3-2
3.1.1 Front panel .................................................................................. 3-2
3.1.2 Rear panel .................................................................................. 3-2
3.2 Function of each part of the panels ..................................................... 3-3
3.2.1 Front panel .................................................................................. 3-3
3.2.2 Rear panel .................................................................................. 3-4
3.1 Name of each part of the panels

This section explains the names, functions, and outline of the operation of the front and rear panels.

3.1.1 Front panel

1) LCD
2) “LOCAL” key
3) Current-monitor terminals
4) Voltage tracking status indicator (LED)
5) Output common terminal
6) Menu operation keys
7) Output operation keys
8) Output terminals

19) USB connector
20) LAN connector

Figure 3-2 Rear panel
3.2 Function of each part of the panels

3.2.1 Front panel

1) LCD
   This displays setting menus, errors, and so on.

2) “LOCAL” key (LOCAL)
   This is a key to switch from remote control state to panel operation.

3) Current-monitor terminals (+I MONITOR, -I MONITOR)
   They can be used to measure output current. They output voltage with conversion gain of 1 V/100 mA.
   There are two BNC receptacle connectors (positive and negative), and their output impedance is about 1 kΩ.
   Ex: When the output current is 100 mA, the output of a current-monitor terminal is 1 V.

4) Voltage tracking status indicator (LED, ±VOLT TRACKING)
   This is a green LED indicating that the voltage setting mode (Vset MODE) is "TRACKING".

5) Output common terminal (COM)
   This is connected to the output common (COM) and corresponds to the banana plug of φ 4 mm.
   Wire of φ 2.5 mm or less can also be connected.

6) Menu operation keys
   These keys are used to make settings. There are seven keys: up, down, left, right, MENU, EXIT, and ENTER.

7) Output operation keys (+OUTPUT ON/OFF, -OUTPUT ON/OFF)
   They are the keys (positive and negative) to switch output on and off. They switch on and off each time they are pressed.

8) Output terminals (+OUTPUT, -OUTPUT)
   There are two BNC receptacle connectors (positive and negative) to output voltage.

9) Output status indicators (LED, +OUTPUT, -OUTPUT)
   They are two orange LEDs indicating the output is on. There are two: positive and negative.

10) Output coupled status indicator (LED, ±ON/OFF COUPLED)
    This is a green LED indicating that the output mode (Vout MODE) is "COUPLED".
3.2 Function of each part of the panels

3.2.2 Rear panel

11) Enclosure terminal (CHASSIS)
   This is connected to the enclosure (CHASSIS) and corresponds to the banana plug of $\phi$ 4 mm. Wire of $\phi$ 2.5 mm or less can also be connected.

12) Certification label
   This is a label indicating the passing of inspection at NF Corporation.

13) Power supply voltage selector (VOLTAGE SELECTOR)
   This is a rotary switch that switches the setting of the power supply voltage. Switch with the coin-driver according to the power supply voltage. To prevent the power supply voltage selector switch from being in a half-way position, set the switch to the position to where it clicks.

14) Fuse holder (FUSE)
   This holder stores a fuse that protects this product.
   When replacing fuses, follow the rating and do it in the proper manner. For details, see "2.3 Grounding and Power Connections".

15) Power switch (POWER)
   This is a switch to switch power supply on and off.

16) Power inlet (~LINE)
   This is an inlet for connecting the power supply. Supply the voltage set by the power supply voltage selector. Furthermore, the center pole of the 3-pole plug is a protective ground terminal. Be sure to ground it.

17) Identification label
   This label shows the model and serial number of this product.

18) RS-232 connector (RS-232)
   This is used for remote control.
   Use a crossover cable to connect this product to the controller. For details, refer to "Connection" on page 5-4.

19) USB connector (USB)
   This is a USB 2.0 Type B compliant connector used for remote control.
   To connect this product to the controller, use the connection cable for the USB 2.0 Type B connector. For details, refer to "Connection" on page 5-2.

20) LAN connector (LAN)
   This is a LAN connector used for remote control.
   Use a CAT 5e or later compliant cable to connect this product to the controller. For details, refer to "Connection" on page 5-6.
4. Operation procedure

4.1 Display and operation for powering up

4.1.1 What to check before turning the power on
Before turning the power on, read "2.3 Grounding and Power Connections" and check this product’s grounding and power supply voltage.

4.1.2 Turning power on and off
This product can be switched on and off by operating the power switch on the rear panel.

4.1.3 Setting at power on
The setting state when this product is started will be that when last powered off. However, only the outputs state is set by "Power on setting (POW ON Vout)". For "Setting at power on (POW ON Vout)", refer to "The output state at startup (POW ON Vout)" on page 4-21.

4.1.4 Startup behavior and display
The internal check at startup starts automatically, and during this check (about 3 seconds) a message is displayed on the LCD, as shown in Figure 4-1.

```
MODEL LP6016-01
FW ver 1.00
```

Figure 4-1 Display example at startup

When the internal check is completed, a message is displayed on the LCD, as shown in Figure 4-2. Check that an error message, "OHP" or "OCP", is not displayed on the LCD.

If such an error message is displayed, refer to “6.1 Error messages” and take appropriate action.

```
+ V = +0000000V
- V = -0000000V
```

Figure 4-2 Initial display of LCD example

4.1.5 Warm-up time
The warm-up time for this product is 60 minutes. To satisfy the specifications of "voltage setting accuracy" and "current-monitor accuracy", always warm up.
4.2 The list of panel operations and functions

This section explains the panel operations and functions of this product.
The panel operation menu tree is shown in Figure 4-3.
4.2 The list of panel operations and functions

4.2.1 Basic panel operation and display examples

This section shows basic panel operation and display examples using menu operation keys. There are seven menu operation keys (up, down, left, right, MENU, EXIT, ENTER) used when making settings.

- **Cursor and selection symbol**
  - The “▶” symbol displayed when selecting a menu item has the role of a cursor. You can move it using the up and down keys. In the example shown in Figure 4-4, it is displayed in front of "RS - 232".
  - The “ ✗” symbol displayed when selecting a menu item indicates the current setting state. In the example shown in Figure 4-4, it is displayed in front of "USB".
  - The "_" symbol (underscore) displayed when setting the value indicates the setting digit. In the example shown in Figure 4-5, it is displayed under the first digit after the decimal place in the bottom row.

```
INTERFACE ✗ USB ▶ RS - 232
```

Figure 4-4 Cursor display example-1

```
LIMIT ▶ + V  =  + 16 . 10000 V
        ▶ - V  =  - 10 . 50000 V
```

Figure 4-5 Cursor display example-2

- **Initial display**
  This is displayed after starting up this product and internal check. Even when pressing the EXIT key at the top menu or when setting initialization is executed, this initial screen is also displayed.
  A display example is shown in Figure 4-6, and the voltage settings of the positive and negative outputs are displayed.
  The voltage cannot be set on this screen.

```
+ V  =  + 00 . 0000 V
- V  =  - 00 . 0000 V
```

Figure 4-6 Initial display example
4.2 The list of panel operations and functions

- **Menu**

  When pressing the **MENU** key, the top menu shown in Figure 4-7 is displayed.
  The menu tree is shown in Figure 4-3. By pressing the **ENTER** key, transitions to the right or lower section of the tree. By pressing the **EXIT** key, transitions to the left or upper section of the tree.
  For example, press the **ENTER** key in the state shown in Figure 4-7, the menu shifts to the output voltage setting menu shown in Figure 4-8.
  Also, press the **EXIT** key in the state shown in Figure 4-8, which will shift to the top menu shown in Figure 4-7.

```
MENU    ➤ VOLTAGE
         LIMIT
```

**Figure 4-7 Top menu display example**

```
VOLTAGE ➤ + V = + 0 0 . 0 0 0 0 V
         − V = − 0 0 . 0 0 0 0 V
```

**Figure 4-8 Display example of output voltage setting menu**
4.2 The list of panel operations and functions

- **Value setting operation**
  Values, such as voltage, are set using the up, down, left, and right keys.
  Press the left and right keys to select the digit to be modified, then press the up and down keys to change the number of the digit.
  You can also continuously change the value or digit to be set by pressing and holding any of the 4 keys.
  By operating the up and down keys, the value changing carries-up and down.
  Even when setting both positive and negative values, pressing the up key increases the absolute value. Pressing the down key decreases the absolute value.

Ex: When setting the negative limit voltage
Figure 4-9 shows an example display when setting the negative limit voltage. From this state, Figure 4-10 to Figure 4-13 show the shift when pressing the up, down, left, and right keys, respectively.

![Figure 4-9 Display example when setting the negative limit voltage](image)

![Figure 4-10 Display example when setting the negative limit voltage (when press up key)](image)

![Figure 4-11 Display example when setting the negative limit voltage (when press down key)](image)

![Figure 4-12 Display example when setting the negative limit voltage (when press left key)](image)

![Figure 4-13 Display example when setting the negative limit voltage (when press right key)](image)
4.2 The list of panel operations and functions

4.2.2 Setting the output voltage (VOLTAGE)

This is a function to set the output voltage. There are two output voltages: positive (+V) and negative (-V).

The positive and negative output voltages can be set independently or symmetrically.
→Refer to "Voltage setting mode (Vset MODE)" on page 4-20.

- Setting the positive output voltage

This is a function to set the positive output voltage. A display example at this function is shown in Figure 4-14.

The setting range is 0.0000 to +16.1000 V, and the setting resolution is 0.0005 V.

[Panel operation procedure]
1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "VOLTAGE" and press the [ENTER] key.
3) Use the up key to move the cursor to "+V" and press the [ENTER] key.
4) Use the up, down, left, and right keys to set the positive output voltage.
   * The setting voltage change is immediately reflected to the output voltage.
   * The positive output voltage cannot be set to a value exceeding the positive limit voltage.
   Ex: If the positive limit voltage is set to “+10.0000 V”, the positive output voltage cannot be set to “+10.0100 V”.
   * When press the [EXIT] key, the output voltage resets to the previous value before the change.
5) Press the [ENTER] key to finish the positive output voltage setting.

![Figure 4-14 Display example when setting the positive output voltage](image)

V O L T A G E + V = + 1 2 3 4 5 0 V
- V = - 0 0 0 0 0 0 V
4.2 The list of panel operations and functions

- Setting the negative output voltage
  This is a function to set the negative output voltage. A display example of this function is shown in Figure 4-15.
  The setting range is 0.0000 to -16.1000 V, and the setting resolution is 0.0005 V.

[Panel operation procedure]
1) Press the MENU key to enter the top menu.
2) Use the up and down keys to move the cursor to "VOLTAGE" and press the ENTER key.
3) Use the down key to move the cursor to "-V" and press the ENTER key.
4) Use the up, down, left, and right keys to set the negative output voltage.
   * The setting voltage change is immediately reflected to the output voltage.
   * The negative output voltage cannot be set to a value exceeding the negative limit voltage.
     Ex: If the negative limit voltage is set to “-5.0000 V”, the negative output voltage cannot be set to “-5.1000 V”.
   * When the setting value is "-10.1000 V" and the cursor is at the first digit after the decimal place, pressing the up key will result in "-10.2000 V", and pressing the down key will result in "-10.0000 V".
   * When press the EXIT key, the output voltage resets to the previous value before the change.
5) Press the ENTER key to finish the negative output voltage setting.

\[
\begin{array}{c}
\text{VOLTAGE} \\
\text{+ V = + 1 0 . 0 0 0 0 V} \\
\text{− V = − 0 5 . 4 3 2 0 V}
\end{array}
\]

Figure 4-15 Display example when setting the negative output voltage
4.2 The list of panel operations and functions

4.2.3 Setting the limit voltage (LIMIT)

This is a function to set the limit voltage. There are two voltages: positive (+V) and negative (-V). By setting the limit voltage, it becomes impossible to set the output voltage to exceed it. This is also a function to limit the setting so that overvoltage is not applied to the load due to operation mistakes.

- Setting the positive limit voltage

This is a function to set the positive limit voltage. A display example of this function is shown in Figure 4-16.

The setting range is +0.0005 to +16.1000 V, and the setting resolution is 0.0005 V.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "LIMIT" and press the [ENTER] key.
3) Use the up key to move the cursor to "+V" and press the [ENTER] key.
4) Use the up, down, left, and right keys to set the positive limit voltage and press the [ENTER] key.
   * When press the [EXIT] key, the limit voltage resets to the previous value.
   * You cannot enter the "LIMIT" menu while either output is on. Turn off both outputs before setting the limit voltage.
   * The positive limit voltage cannot be set to a value less than the positive output voltage.

Ex: If the positive output voltage is set to “+12.3450 V”, the positive limit voltage cannot be set to “+12.0000 V”.

![Display example when setting the positive limit voltage](image)

Figure 4-16 Display example when setting the positive limit voltage
4.2 The list of panel operations and functions

- **Setting the negative limit voltage**

  This is a function to set the negative limit voltage. A display example of this function is shown in Figure 4-17.

  The setting range is -0.0005 to -16.1000 V, and the setting resolution is 0.0005 V.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "LIMIT" and press the [ENTER] key.
3) Use the down key to move the cursor to "-V" and press the [ENTER] key.
4) Use the up, down, left, and right keys to set the negative limit voltage and press the [ENTER] key.

* When press the [EXIT] key, the limit voltage resets to the previous value.
* You cannot enter the "LIMIT" menu while either output is on. Turn off both outputs before setting the limit voltage.
* The negative limit voltage cannot be set to a value less than the negative output voltage.
  Ex: If the negative output voltage is set to “-5.4320 V”, the negative limit voltage cannot be set to “-5.0000 V”.
* When the setting value is "-10.5000 V" and the cursor is at the first digit after the decimal place, pressing the up key will result in "-10.6000 V", and pressing the down key will result in "-10.4000 V".

4.2.4 Setting of the remote control (INTERFACE)

This is a function to set the interface and parameters to operate with remote control. A display example is shown in Figure 4-18.

USB, RS-232, or LAN can be selected as the interface.

<table>

- Select USB interface (USB)

The remote control interface is set to USB. A display example is shown in Figure 4-19.

[Panel operation procedure]
1) Press the MENU key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the ENTER key.
3) Use the up and down keys to move the cursor to "USB" and press the ENTER key.

- Indicate vendor ID (VENDOR ID)

This is a function to indicate the vendor ID for USB control. A display example is shown in Figure 4-20.

[Panel operation procedure]
1) Press the MENU key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the ENTER key.
3) Use the up and down keys to move the cursor to "USB" and press the ENTER key.
4) Use the up and down keys to move the cursor to "VENDOR ID" and press the ENTER key.

* Indicate product ID (PRODUCT ID)

This is a function to indicate the product ID for USB control. A display example is shown in Figure 4-21.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "USB" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to "PRODUCT ID" and press the [ENTER] key.

4.2 The list of panel operations and functions

- **Select RS-232 interface (RS-232)**
  The remote control interface is set to RS-232. A display example is shown in Figure 4-22.

  [Panel operation procedure]
  1) Press the [MENU] key to enter the top menu.
  2) Use the up and down keys to move the cursor to "INTERFACE” and press the [ENTER] key.
  3) Use the up and down keys to move the cursor to "RS-232" and press the [ENTER] key.

  ![Figure 4-22 Display example after selecting RS-232](image)

- **Select baud rate (BAUD RATE)**
  This is a function to select the baud rate for RS-232 control. A display example is shown in Figure 4-23.
  Select the baud rate from 4 choices: 9600, 19200, 38400, or 57600 bps.

  [Panel operation procedure]
  1) Press the [MENU] key to enter the top menu.
  2) Use the up and down keys to move the cursor to "INTERFACE” and press the [ENTER] key.
  3) Use the up and down keys to move the cursor to "RS-232" and press the [ENTER] key.
  4) Use the up and down keys to move the cursor to "BAUD RATE” and press the [ENTER] key.
  5) Use the up and down keys to select the baud rate and press the [ENTER] key.

  * When press the [EXIT] key or [MENU] key without pressing the [ENTER] key, the baud rate backs to the previous selection.

  ![Figure 4-23 Display example when setting the baud rate](image)
4.2 The list of panel operations and functions

- **Select parity (PARITY)**
  This is a function to select the parity for RS-232 control. A display example is shown in Figure 4-24.
  Select the parity from 3 choices: NONE, ODD, or EVEN.

[Panel operation procedure]
1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "RS-232" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to "PARITY" and press the [ENTER] key.
5) Use the up and down keys to select the parity and press the [ENTER] key.
   * When press the [EXIT] key or [MENU] key without pressing the [ENTER] key, the parity backs to the previous selection.

![Figure 4-24 Display example when setting the parity](image)

- **Select handshake (HANDSHAKE)**
  This is a function to select the handshake for RS-232 control. A display example is shown in Figure 4-25.
  Select the handshake from 3 choices: NONE, SOFTWARE, or HARDWARE.

[Panel operation procedure]
1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "RS-232" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to "HANDSHAKE" and press the [ENTER] key.
5) Use the up and down keys to select the handshake and press the [ENTER] key.
   * When press the [EXIT] key or [MENU] key without pressing the [ENTER] key, the handshake backs to the previous selection.

![Figure 4-25 Display example when setting the handshake](image)
4.2 The list of panel operations and functions

• Select terminator (TERMINATOR)

This is a function to select the terminator for RS-232 control. A display example is shown in Figure 4-26.

Select the terminator from 3 choices: CR, LF, or CR LF.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "RS-232" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to "TERMINATOR" and press the [ENTER] key.
5) Use the up and down keys to select the terminator and press the [ENTER] key.

* When press the [EXIT] key or [MENU] key without pressing the [ENTER] key, the terminator backs to the previous selection.

![Terminator Selection Example]

Figure 4-26 Display example when setting the terminator
4.2 The list of panel operations and functions

- **Select LAN interface (LAN)**
  The remote control interface is set to LAN. A display example is shown in Figure 4-27.

[Panel operation procedure]
1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "LAN" and press the [ENTER] key.
* After selecting the LAN interface, this product does not accept any operations for about 10 seconds to update settings. At this time, the LCD shows the message in Figure 4-28.

![Figure 4-27 Display example after selecting LAN](Image)

![Figure 4-28 Display example when updating settings](Image)

- **Indicate MAC address (MAC ADDRESS)**
  This is a function to indicate the MAC address for LAN control. A display example is shown in Figure 4-29.

[Panel operation procedure]
1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "LAN" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to "MAC ADDRESS" and press the [ENTER] key.

![Figure 4-29 Example to indicate the MAC address](Image)
4.2 The list of panel operations and functions

**Setting the network parameters (NW SET)**

This is a function to set three types of network parameters: IP address, subnet mask, and default gateway for LAN control. Display examples are shown in Figure 4-30 to Figure 4-32.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to “INTERFACE” and press the [ENTER] key.
3) Use the up and down keys to move the cursor to “LAN” and press the [ENTER] key.
4) Use the up and down keys to move the cursor to “NW SET” and press the [ENTER] key. It then changes to the “IP ADDRESS” menu.
5) Use the up, down, left, and right keys to set “IP ADDRESS” and press the [ENTER] key. It then changes to the “SUBNET MASK” menu.
6) Use the up, down, left, and right keys to set “SUBNET MASK” and press the [ENTER] key. It then changes to the “DEF GATEWAY” menu.
7) Use the up, down, left, and right keys to set “DEF GATEWAY” and press the [ENTER] key. The three setting are then confirmed.

* After setting “NW SET”, this product does not accept any operations for about 10 seconds to update settings. At this time, the LCD shows the message in Figure 4-33.

![Figure 4-30 Display example when setting the IP address](image1)

![Figure 4-31 Display example when setting subnet mask](image2)

![Figure 4-32 Display example when setting default gateway](image3)

![Figure 4-33 Display example when updating settings](image4)
4.2 The list of panel operations and functions

- **Indicate port number (PORT NUMBER)**
  
  This is a function to indicate the port number for LAN control. A display example is shown in Figure 4-34.

  [Panel operation procedure]
  1) Press the [MENU] key to enter the top menu.
  2) Use the up and down keys to move the cursor to "INTERFACE" and press the [ENTER] key.
  3) Use the up and down keys to move the cursor to "LAN" and press the [ENTER] key.
  4) Use the up and down keys to move the cursor to "PORT NUMBER" and press the [ENTER] key.

  ![Port Number Example](image)

  Figure 4-34 Example to indicate the port number
4.2 The list of panel operations and functions

4.2.5 Others (UTILITY)

This includes menu items not included in the above menus. Display examples are shown in Figure 4-35 and Figure 4-36.

There are 9 items: Vout MODE, Vset Mode, POW ON Vout, LCD LIGHT, LCD CONTRAST, INITIALIZE, INFORMATION, FW VERSION, and CAL DATE.

<table>
<thead>
<tr>

<th>FW VERSION</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CAL DATE</td>
</tr>
</tbody>
</table>

Figure 4-36 Display example of UTILITY menu-2

- **Output mode (Vout MODE)**

  The states of the positive and negative outputs can be switched independently or coupled. They can be set in the "Vout MODE" menu. A display example is shown in Figure 4-37.

  - **INDEP**: Independent control. Pressing the "OUTPUT ON/OFF" key turns on and off the positive voltage output, and pressing the "OUTPUT ON/OFF" key turns on and off the negative voltage output.
  
  - **COUPLED**: Coupled control. By pressing the "OUTPUT ON/OFF" key or "OUTPUT ON/OFF" key, both the positive and negative outputs turn on and off.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "UTILITY" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "Vout MODE" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to select and press the [ENTER] key.

  * You cannot enter the "Vout MODE" menu while either output is on. Turn off both outputs before setting “Vout MODE”.

<table>
<thead>
<tr>
<th>Vout MODE</th>
<th>* INDEP</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>COUPLED</td>
</tr>
</tbody>
</table>

Figure 4-37 Display example when setting “Vout MODE”
4.2 The list of panel operations and functions

- **Voltage setting mode (Vset MODE)**
  
  The positive and negative output voltages can be set independently or symmetrically. They can be set in the "Vset MODE" menu. A display example is shown in Figure 4-38.

  - **INDEP:** Independent control. The positive and negative output voltages can be set independently.
  - **TRACKING:** Tracking control. The positive and negative output voltages can be set symmetrically so that the absolute values of them match.

[Panel operation procedure]

1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "UTILITY" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "Vset MODE" and press the [ENTER] key.
4) Use the up and down keys to move the cursor to select and press the [ENTER] key.
   
   * You cannot enter the "Vset MODE" menu while either output is on. Turn off both outputs before setting “Vset MODE”.
   
   * When the absolute value of the positive and negative output voltages do not match, changing the voltage setting mode from independent to tracking sets the output voltage to match the lower one.

   Ex: When the positive output voltage is +10.0000 V and the negative one is -12.0000 V, changing the voltage setting mode from independent to tracking sets the negative output voltage to -10.0000 V.

![Figure 4-38 Display example when setting “Vset MODE”](image-url)
4.2 The list of panel operations and functions

- **The output state at startup (POW ON Vout)**
  The state of outputs, on or off at startup, is selectable. It can be set in the "POW ON Vout" menu. A display example is shown in Figure 4-39.

  - **ON:** Both positive and negative outputs are on at startup.
  - **OFF:** Both positive and negative outputs are off at startup.
  - **LAST STATE:** At startup, both positive and negative outputs are the same as the last operation state.

  [Panel operation procedure]
  1) Press the [MENU] key to enter the top menu.
  2) Use the up and down keys to move the cursor to "UTILITY" and press the [ENTER] key.
  3) Use the up and down keys to move the cursor to "POW ON Vout" and press the [ENTER] key.
  4) Use the up and down keys to move the cursor to select and press the [ENTER] key.

  ![Figure 4-39 Display example when setting "POW ON Vout"]

- **Brightness of the LCD (LCD LIGHT)**
  The brightness of the LCD is adjustable in 4 levels. This can be set in the "LCD LIGHT" menu. A display example is shown in Figure 4-40.
  When set to LEVEL 0, the backlight is turned off. The brightness increases as the level number increases, and the maximum brightness is LEVEL 3.

  [Panel operation procedure]
  1) Press the [MENU] key to enter the top menu.
  2) Use the up and down keys to move the cursor to "UTILITY" and press the [ENTER] key.
  3) Use the up and down keys to move the cursor to "LCD LIGHT" and press the [ENTER] key.
  4) Use the up and down keys to select the level number and press the [ENTER] key.

  ![Figure 4-40 Display example when setting "LCD LIGHT"]
4.2 The list of panel operations and functions

- **Contrast of the LCD (LCD CONTRAST)**
  The contrast of the LCD is adjustable in 8 levels. This can be set in the "LCD CONTRAST" menu. A display example is shown in Figure 4-41.
  LEVEL 0 is the lowest contrast. The contrast increases as the level number increases, and the highest contrast is LEVEL 7.

  [Panel operation procedure]
  1) Press the **MENU** key to enter the top menu.
  2) Use the up and down keys to move the cursor to "UTILITY" and press the **ENTER** key.
  3) Use the up and down keys to move the cursor to "LCD CONTRAST" and press the **ENTER** key.
  4) Use the up and down keys to select the level number and press the **ENTER** key.

  ![LCD CONTRAST](image)

  **Figure 4-41 Display example when setting “LCD CONTRAST”**
4.2 The list of panel operations and functions

- **Setting initialization (INITIALIZE)**

  This is a function to initialize the settings. However, the settings of remote control and LCD are not initialized. A display example is shown in Figure 4-42.

  [Panel operation procedure]
  1) Press the **MENU** key to enter the top menu.
  2) Use the up and down keys to move the cursor to "UTILITY" and press the **ENTER** key.
  3) Use the up and down keys to move the cursor to "INITIALIZE" and press the **ENTER** key.
  4) Use the up and down keys to move the cursor to "EXECUTE" and press the **ENTER** key.

  After setting initialization is complete, the LCD returns to the initial display.
  * When press the **ENTER** key with the cursor on "CANCEL", initialization does not execute.
  * When press the **EXIT** key, initialization does not execute.
  * You cannot enter the "INITIALIZE" menu while either output is on. Turn off both outputs before initialization.
  * The settings after initialization are as listed in Table 4-1.

  **Table 4-1 Settings after initialization**
  | The state of the positive voltage output | OFF  |
  | The state of the negative voltage output | OFF  |
  | Positive output voltage                 | +00.0000 V |
  | Negative output voltage                 | -00.0000 V |
  | Positive limit voltage                  | +16.1000 V |
  | Negative limit voltage                  | -16.1000 V |
  | Setting of remote control               |        |
  | Interface                                | Not initialized |
  | Baud rate                                | Not initialized |
  | Parity                                   | Not initialized |
  | Handshake                                | Not initialized |
  | Terminator                               | Not initialized |
  | IP address                               | Not initialized |
  | Subnet mask                              | Not initialized |
  | Default gateway                          | Not initialized |
  | Output mode (VoutMODE)                   | INDEP (Independent control) |
  | Voltage setting mode (Vset mode)         | INDEP (Independent control) |
  | The output state at startup (POW ON Vout)| OFF (Always off at startup) |
  | Brightness of LCD (LCD LIGHT)            | Not initialized |
  | Contrast of LCD (LCD CONTRAST)           | Not initialized |

4.2 The list of panel operations and functions

- **Indicate the product information (INFORMATION)**
  This is a function to indicate the model name of this product and serial number. Display examples are shown in Figure 4-43 to Figure 4-44.
  Use the up and down keys to change the display to model or serial number.

  [Panel operation procedure]
  1) Press the **MENU** key to enter the top menu.
  2) Use the up and down keys to move the cursor to "UTILITY" and press the **ENTER** key.
  3) Use the up and down keys to move the cursor to "INFORMATION" and press the **ENTER** key.
  4) Use the up and down keys to change the display to model or serial number.

  ![Figure 4-43 Example to indicate the product information (model)](image1)

  ![Figure 4-44 Example to indicate the product information (serial number)](image2)

- **Indicate the firmware version (FW VERSION)**
  This is a function to indicate the firmware version. A display example is shown in Figure 4-45.

  [Panel operation procedure]
  1) Press the **MENU** key to enter the top menu.
  2) Use the up and down keys to move the cursor to "UTILITY" and press the **ENTER** key.
  3) Use the up and down keys to move the cursor to "FW VERSION" and press the **ENTER** key.

  ![Figure 4-45 Example to indicate the firmware version](image3)
4.2 The list of panel operations and functions

- **Indicate the last calibration date (CAL DATE)**
  
  This is a function to indicate the last date that this product was calibrated by NF Corporation or our service engineers. A display example is shown in Figure 4-46.

  [Panel operation procedure]
  1) Press the **MENU** key to enter the top menu.
  2) Use the up and down keys to move the cursor to “UTILITY” and press the **ENTER** key.
  3) Use the up and down keys to move the cursor to “CAL DATE” and press the **ENTER** key.

  ![CAL DATE example](image)

  Figure 4-46 Example to indicate the last calibration date
4.3 Operations no included in the menu tree

4.3.1 Switching the output on and off
The positive and negative outputs can be switched independently or coupled.
*Refer to "Output mode (Vout MODE)" on page 4-19.

- Switching the positive output on and off
  Pressing the +OUTPUT ON/OFF key switches the positive output on and off.

- Switching the negative output on and off
  Pressing the -OUTPUT ON/OFF key switches the negative output on and off.

[Precautions in use]
The relays switching the outputs on and off are the life span parts. Again and again switching the outputs on and off may damage the relays. In particular, under conditions of use that switching the outputs on and off frequently, failure may occur even within the warranty period of this product. So, please avoid such usage.

4.3.2 Switching from remote control state to local operation state
When operating with remote control, this product enters the state in which local operation (panel operation) is not accepted, and "REMOTE" is displayed on the LCD.

When press the LOCAL key, "REMOTE" on the LCD disappears and this product enters the state in which local operation (panel operation) can be accepted.

4.3.3 Initialization of the LCD setting
This is the operation to initialize the brightness and contrast settings (LCD LIGHT, LCD CONTRAST) of the LCD. Keep pressing the MENU key for more than 3 seconds to execute. Table 4-2 lists the settings after initialization.

<table>
<thead>
<tr>
<th>LCD LIGHT (LCD brightness)</th>
<th>LEVEL 3 (brightest)</th>

4.4 Connection notes

4.4.1 Output connection

Although this product can supply low noise DC voltage, its performance may not be optimal depending on the connection method. Follow the precautions below and make the appropriate connections.

1) Connect using a coaxial cable.
   When connecting with a non-shielded cable, external noise may affect this product.
2) Connect using a cable of about 2 m or less in length.
   When using an unnecessarily long cable, even the coaxial cable may be affected by external noise. Load regulation may deteriorate depending on the wiring resistance of the cable. Connect using an appropriate length.
3) The contact shape and dimensions of the BNC connector are regulated by IEC or JIS standards. Use connectors conforming to these standards. If using connectors that are non-compliant, the output terminal will become damaged, deteriorating performance.

4.4.2 Current-monitor connection

The current-monitor terminal of this product should be connected to a high input impedance circuit such as DC voltage measurement input of a digital multimeter. Since the output impedance of the current-monitor terminal is 1 kΩ, the error increases when connected to a circuit with low input impedance.

Check the input impedance of the circuit to connect before connecting.
Also, the output common and current-monitor common are connected. When the current-monitor terminal is connected to a grounded terminal such as an oscilloscope, its common will also be grounded.

5.1 Preparations before remote control

This product can be remotely controlled via the USB, RS-232, and LAN interfaces. With remote control, you can control this product and monitor the protection status the same as with panel operation.

The connectors of each interface are on the rear panel.

5.1.1 Select the remote control interface

Select USB, RS-232, or LAN as the remote control interface. The interfaces cannot be used at the same time.

5.1.2 USB interface

- Controller
  When using the USB interface, use a controller (e.g., PC) equipped with a USB port.
  Install the USB CDC driver on the controller.
  USB CDC: Universal Serial Bus Communication Device Class
  The USB CDC driver dedicated to this product can be downloaded from our website.
  [http://www.nfcorp.co.jp/english/index.html]

- Preparation of this product
  Select "USB" at the interface setting of this product.
  For the operation procedure, refer to "Select USB interface (USB)" on page 4-11.

- Connection
  The USB interface connector of this product is USB 2.0 Type B. Use a cable that is suitable for the USB 2.0 Type B connector to connect this product to the controller.
  Also, connect using cables of the maximum length (5 m) or less specified in the standard.
5.1 Preparations before remote control

- **Parameters**
  Set so that the parameters match between this product and the controller. In case of mismatch, problems or errors may occur.

- **Message terminator**
  Both program and response message terminators are "LF". This cannot be changed.

- **Vendor ID**
  The vendor ID of this product is "0x0D4A". This can also be confirmed with the function indicating vendor ID.
  For the operation procedure, refer to "Indicate vendor ID (VENDOR ID)" on page 4-11.

- **Product ID**
  The product ID of this product is "0x61". This can also be confirmed with the function indicating product ID.
  For the operation procedure, refer to "Indicate product ID (PRODUCT ID)" on page 4-12.

- **Serial number**
  The serial number is unique to the product. This can be confirmed with the function indicating product information or the identification label on the rear panel.
  For the operation procedure, refer to "Indicate the product information (INFORMATION)" on page 4-24.

- **Identification of USB devices**
  Connect this product to the USB port of a PC using a USB cable.
  When using a PC with a USB CDC driver installed, it is recognized automatically.
  This product is identified by the vendor ID, product ID, and serial number. This information can be confirmed from the procedure above.
  Use this information when manually identifying this product, i.e., when this product can not be recognized automatically.

- **Precautions**
  - When connecting via a USB hub, this product may not operate properly.
  - When connecting with a cable exceeding the maximum length (5 m) specified in the standard, this product may not operate properly.
  - To avoid malfunction caused by radiated electromagnetic field noise, be sure to use a shielded cable.
5.1 Preparations before remote control

5.1.3 RS-232 interface

- **Controller**
  When using the RS-232 interface, use a controller (e.g., PC) equipped with an RS-232 port.

- **Preparation of this product**
  Select "RS-232" at the interface setting of this product.
  For the operation procedure, refer to "Select RS-232 interface (RS-232)" on page 4-13.
  Also, set the following parameters.
  - Baud rate: for this operation procedure, refer to “Select baud rate (BAUD RATE)” on page 4-13.
  - Parity: for this operation procedure, refer to “Select parity (PARITY)” on page 4-14.
  - Handshake: for this operation procedure, refer to “Select handshake (HANDSHAKE)” on page 4-14.
  - Terminator: for this operation procedure, refer to “Select terminator (TERMINATOR)” on page 4-15.

- **Connection**
  The RS-232 interface connector of this product is a male D-SUB connector (9 pins). The pin assignment of the connector is shown in Figure 5-1, and the pin assignment is listed in Table 5-1.
  Use a crossover cable to connect this product with the controller.
  Also, connect using cables with the maximum length (15 m) or less specified in the standard.

5.1 Preparations before remote control

- **Parameters**
  Set so that the parameters match between this product and the controller. In case of mismatch, problems or errors may occur.

  - **Baud rate**
    Select from 4 types: 9600, 19200, 38400, or 57600 bps.

  - **Data length**
    Data length is 8 bits. This cannot be changed.

  - **Stop bit length**
    Both program and response stop bit lengths are 1 bit. This cannot be changed.

  - **Parity**
    Select from 3 types: NONE, ODD, or EVEN.

  - **Handshake**
    Select from 3 types: NONE, SOFTWARE, or HARDWARE.

  - **Message terminator**
    Select from 3 types: CR, LF, or CR LF.

- **Precautions**
  - Multiple devices cannot be connected simultaneously to one RS-232 port.
  - When connecting with a cable exceeding the maximum length (15 m) specified in the standard, this product may not operate properly.
  - To avoid malfunction caused by radiated electromagnetic field noise, be sure to use a shielded cable.
  - With the handshake set to “NONE”, the communication may not be executed correctly. Use handshake as much as possible.
  - With the handshake set to “HARDWARE”, use the cable with the RTS and CTS signals linked.
5.1 Preparations before remote control

5.1.4 LAN interface

This interface only supports TCP/IP.
It does not correspond to the IP address automatically assigned by DHCP. When connecting to the network, contact the administrator and set the IP address, subnet mask, and default gateway.

- **Controller**
  When using the LAN interface, use a controller (e.g., PC) equipped with a LAN port.

- **Preparation of this product**
  Select "LAN" at the interface setting of this product.
  For the operation procedure, refer to "Select LAN interface (LAN)" on page 4-16.
  Also, set the parameters listed below.
  For this operation procedure, refer to "Setting the network parameters (NW SET)" on page 4-17.

  - IP address
  - Subnet mask
  - Default gateway

- **Connection**
  When connecting to the network, use a straight cable. When connecting to a PC directly, use a crossover cable.
  However, when using a hub or connecting a PC that can automatically recognize straight and crossover, you can use either.
  Use cables compliant with CAT 5e or later. When using a cable of a previous standard, communication speed may be slow or electromagnetic interference to peripheral devices may occur.

- **Parameters**
  Set so that the parameters match between this product and the controller. In case of mismatch, problems or errors may occur.

- **MAC address**
  The MAC address is unique to each product and cannot be changed. It can also be confirmed with the function indicating the MAC address.
  For the operation procedure, refer to “Indicate MAC address (MAC ADDRESS)” on page 4-16.
5.1 Preparations before remote control

- **IP address**
  An IP address is a numerical label assigned to each device connected to a computer network that uses the Internet Protocol for communication. It can be set.
  For the operation procedure, refer to “Setting the network parameters (NW SET)” on page 4-17.

- **Subnet mask**
  Subnet mask separates the network address and host address of the IP address. It can be set.
  For the operation procedure, refer to “Setting the network parameters (NW SET)” on page 4-17.

- **Default gateway**
  Default gateway is the address of the gateway (router) used implicitly when accessing an external network. It can be set.
  For the operation procedure, refer to “Setting the network parameters (NW SET)” on page 4-17.

- **Port number**
  The port number of this product is “10001” and cannot be changed. It can be confirmed with the function indicating port number.
  For the operation procedure, refer to “Indicate port number (PORT NUMBER)” on page 4-18.

- **Message terminator**
  Both program and response message terminators are "LF". This cannot be changed.

- **Precautions**
  - Use cables compliant with CAT 5e or later.
  - To avoid malfunction caused by radiated electromagnetic field noise, be sure to use a shielded cable.
  - Avoid unnecessarily stretching the connecting cable. As the length becomes longer, it is easier to accept external noise.
  - This product does not correspond to the IP address automatically assigned by DHCP. When connecting to the network, contact the administrator and set the IP address, subnet mask, and default gateway. Misconfiguration may interfere with communication on the connected network.
5.1 Preparations before remote control

5.1.5 Precautions for remote control

- **Input buffer**
  - This product stores the received commands in the input buffer first then interprets and executes them.
  - The input buffer size is 512 bytes. Do not send program messages continuously as this size is exceeded. Program messages exceeding the input buffer size are ignored.
  - When receiving a command that is non-compliant with the specifications, an error occurs and an error message is displayed. For error messages, refer to "6.1 Error messages".
  - When sending program messages continuously, in order not to exceed the input buffer size, please leave a transmission interval of the program messages that is longer than 50 msec.

- **Output buffer**
  The output buffer size is 512 bytes.

- **Message terminator**
  When sending a command from the controller, be sure to attach a message terminator to the end of the message string. It dose not work properly without a message terminator.

- **Error queue**
  Errors related to remote control are held in the error queue which can hold up to 20 errors. When it exceeds 20, old errors are deleted in order.
  For errors related to remote control, refer to Table 6-4 in Section 6.1.

5.2 Changing of remote control and local operation states

This product has two states: remote control (remote state) and local operation.
In the local operation state, all panel operations are possible.
In the remote control state, however, this product cannot accept any panel operations except the LOCAL key. Also, as shown in Figure 5-2, "REMOTE" is displayed on the LCD.

| R E M O T E | + V = +16 .1000 V |
| - V = -16 .1000 V |

Figure 5-2 Display example during remote control
5.3 Commands

The remote control command of this product consists of a header of 3 to 5 characters and 0 to 2 parameters. One space is necessary between a header and first parameter.

5.3.1 Parameter Formats

Unless otherwise the parameter format is not defined on each section, integer format (NR1) can be used for setting selection, and integer format (NR1) and real number formats (NR2, NR3) can be used for numerical setting.

- NR1: Integer format
  - This is a format not including a decimal point and the position of the decimal point is interpreted as the end of the last digit.
  - "+" or "+" can be used (when positive, "+" can be omitted).
  - Ex: +1234, -98, 67

- NR2: Real number format (fixed-point number format)
  - This is a format including a decimal point, and its decimal point position is indicated with "." (period).
  - When the digit before the decimal point is omitted, the integer part is interpreted as "0" (zero).
  - "+" or "+" can be used (when positive, "+" can be omitted).
  - Ex: +98.76, -12.0, 4.3

- NR3: Real number format (Exponential format)
  - This consists of a mantissa with a decimal point and an exponent indicating $10^n$. The position of the decimal point is "." (period), and the boundary between the mantissa and exponent is indicated by "E".
  - When the digit before the decimal point is omitted, the integer part is interpreted as "0" (zero).
  - "+" or "+" can be used (when positive, "+" can be omitted).
  - A sign can be attached to each mantissa and exponent.
  - Ex: +0.123E4, -56.0E-7, 8.9E-1

5.3.2 Symbols

- The vertical bar (|) means selecting one from several words.
- “xx”, “yy”, “zz”, and “aa” mean parameter 1, 2, 3 and 4 respectively.

5.3.3 Input format

Commands can be uppercase or lowercase. Also, uppercase and lowercase may be mixed. However, half-width characters are only valid; double-byte characters cannot be used.
5.4 Command explanations

The header list of commands for this product is shown in Table 5-2.

5.4.1 Switch output on/off

- **Set**

  **Command:** OUT xx,yy
  **Parameter 1:** 1|2 (NR1)
  1: Positive output, 2: Negative output
  **Parameter 2:** 0|1 (NR1)
  0: OFF, 1: ON
  **Command Ex:** OUT 2,1
  Switch negative output to on.

- **Query**

  **Command:** OUT? xx
  **Parameter 1:** 1|2 (NR1)
  1: Positive output, 2: Negative output
  **Return value:** yy
  **Parameter 2:** 0|1 (NR1)
  0: OFF, 1: ON
  **Command Ex:** OUT? 1
  Query whether positive output is on or off.
  **Return value Ex:** 1
  The positive output is on.
5.4 Command explanations

5.4.2 Output voltage (Voltage)

- **Set**
  
  Command: VLT xx,yy
  
  Parameter 1: 1|2 (NR1)
  
  1: Positive output, 2: Negative output
  
  Parameter 2: Voltage (NR2, NR3)
  
  Setting range: Positive: 0.0000 to +16.1000, Negative: 0.0000 to -16.1000
  
  Setting resolution: 0.0005
  
  Command Ex: VLT 1,+1.2345
  
  Set the positive output voltage to +1.2345 V.
  
  Precaution: It cannot be set to exceed the limit voltage.

- **Query**
  
  Command: VLT? xx
  
  Parameter 1: 1|2 (NR1)
  
  1: Positive output, 2: Negative output
  
  Return value: yy
  
  Parameter 2: Voltage (NR2, NR3)
  
  Command Ex: VLT? 2
  
  Query negative output voltage.
  
  Return value Ex: -9.8765
  
  The negative output voltage is -9.8765 V.

5.4.3 Limit voltage (LIMIT)

- **Set**
  
  Command: LMV xx,yy
  
  Parameter 1: 1|2 (NR1)
  
  1: Positive output, 2: Negative output
  
  Parameter 2: Limit voltage (NR2, NR3)
  
  Setting range: Positive: +0.0005 to +16.1000, Negative: -0.0005 to -16.1000
  
  Setting resolution: 0.0005
  
  Command Ex: LMV 1,+1.2345
  
  Set the positive limit voltage to +1.2345 V.
  
  Precaution: It cannot be set to be less than the output voltage.
5.4 Command explanations

- Query
  Command: LMV? xx
  Parameter 1: 1|2 (NR1)
  1: Positive output, 2: Negative output
  Return value: yy
  Parameter 2: Limit voltage (NR2, NR3)
  Command Ex: LMV? 2
  Query negative limit voltage.
  Return value Ex: -9.8765
  The negative limit voltage is -9.8765 V.

5.4.4 Output mode (Vout MODE)

- Set
  Command: OMD xx
  Parameter 1: 0|1 (NR1)
  0: Independently control (INDEP), 1: Coupled control (COUPLED)
  Command Ex: OMD 1
  Set the output mode to coupled control (COUPLED).

- Query
  Command: OMD?
  Parameter: No need
  Return value: xx
  Parameter 1: 0|1 (NR1)
  0: Independently control (INDEP), 1: Coupled control (COUPLED)
  Command Ex: OMD?
  Query output mode.
  Return value Ex: 0
  Output mode is independently controlled (INDEP).

5.4.5 Voltage setting mode (Vset MODE)

- Set
  Command: VMD xx
  Parameter 1: 0|1 (NR1)
  0: Independently control (INDEP), 1: Tracking control (TRACKING)
  Command Ex: VMD 1
  Set the voltage setting mode to tracking control (TRACKING).
• **Query**
  Command: VMD?
  Parameter: No need
  Return value: xx
  Parameter 1: 0|1 (NR1)
  0: Independently control (INDEP), 1: Tracking control (TRACKING)
  
  **Command Ex:** VMD?
  Query voltage setting mode.
  
  **Return value Ex:** 0
  Voltage setting mode is independently controlled (INDEP).

5.4.6 **The output state at startup (POW ON Vout)**

• **Set**
  Command: POS xx
  Parameter 1: 0|1|2 (NR1)
  0: Both positive and negative outputs are off at startup (OFF).
  1: Both positive and negative outputs are on at startup (ON).
  2: At startup, both positive and negative outputs are the same as last operation (LAST STATE).
  
  **Command Ex:** POS 1
  Set the output state at startup to “Both positive and negative outputs are on at startup (ON).”.

• **Query**
  Command: POS?
  Parameter: No need
  Return value: xx
  Parameter 1: 0|1|2 (NR1)
  0: Both positive and negative outputs are off at startup (OFF).
  1: Both positive and negative outputs are on at startup (ON).
  2: At startup, both positive and negative outputs are the same as last operation (LAST STATE).
  
  **Command Ex:** POS?
  Query output state at startup.
  
  **Return value Ex:** 0
  The output state at startup is “Both positive and negative outputs are off at startup (OFF).”.
5.4 Command explanations

5.4.7 Brightness of the LCD (LCD LIGHT)

- **Set**
  
  Command: LBD xx  
  Parameter 1: 0 to 3 (NR1)
  
  0: The backlight of the LCD is off.  
  1 to 3: The brightness increases as the value increases.  
  
  Command Ex: LBD 3  
  Set the brightness of the LCD to maximum.

- **Query**
  
  Command: LBD?  
  Parameter: No need  
  Return value: xx  
  Parameter 1: 0 to 3 (NR1)
  
  0: The backlight of the LCD is off.  
  1 to 3: The brightness increases as the value increases.  
  
  Command Ex: LBD?  
  Query the brightness of the LCD.  
  Return value Ex: 0  
  The backlight of the LCD is off.

5.4.8 Contrast of the LCD (LCD CONTRAST)

- **Set**
  
  Command: LCD xx  
  Parameter 1: 0 to 7 (NR1)
  
  The contrast increases as the value increases.  
  
  Command Ex: LCD 7  
  Set the contrast of the LCD to maximum.

- **Query**
  
  Command: LCD?  
  Parameter: No need  
  Return value: xx  
  Parameter 1: 0 to 7 (NR1)
  
  0: The backlight of the LCD is off.  
  The contrast increases as the value increases.  
  
  Command Ex: LCD?  
  Query the contrast of the LCD.  
  Return value Ex: 0  
  The contrast of the LCD is minimum.
5.4 Command explanations

5.4.9 Query the abnormal state

Command: PST?
Parameter: No need
Return value: xx
Parameter 1: 0 to 63 (NR1)
   Each state is weighted as follows. This value of parameter 1 is sum of them.
   1: The positive output current exceeds the rating and overcurrent protection is working (E102)
   2: The negative output current exceeds the rating and overcurrent protection is working (E103)
   4: Overheat protection is working (E104)
   8: Calibration data are broken (E303)
   16: Setting data are broken (E304, E305)
   32: Hardware error (E901, E902, E903)

Command Ex: PST?
   Query the abnormal condition.

Return value Ex: 3
   Both positive and negative output currents exceed the rating and protection is working.

5.4.10 Query the error queue

Command: ERQ?
Parameter: No need
Return value: xx,yy (String)
Parameter 1: Error number (Refer to "6.1 Error messages")
Parameter 2: Error message ("6.1 Error messages")
   *When the error queue is empty, the return is the value shown in the following "Return value Ex2".

Command Ex: ERQ?
   Reads the oldest error held in the error queue.
   Refer to “Error queue” on page 5-8.

Return value Ex 1: ERROR501,Command error
Return value Ex 2: ERROR0,No error

5.4.11 Clear the error queue

Command: EQC
Parameter: No need
Return value: Nothing
Explanation: Clear entire error queue.
5.4.12 Query the product information
Command: *IDN?
Parameter: No need
Return value: xx,yy,zz,aa (String)
Parameter 1: Vendor name
Parameter 2: Model name
Parameter 3: Serial number
Parameter 4: Firmware version
Command Ex: *IDN?
Return value Ex: NF Corporation,LP6016-01,1234567,1.00

5.4.13 Reset (Initialize)
Command: *RST
Parameter: No need
Return value: Nothing
Explanation: It is the same function as “INITIALIZE” of the panel operation.
For details, refer to “Setting initialization (INITIALIZE)” on page 4-23.
Precaution: It cannot be executed while either output is on.

5.4.14 Switching from remote control state to local operation state
Command: GTL
Parameter: No need
Return value: Nothing
Explanation: It is the same function as pressing the LOCAL key.
For details, refer to Sections 4.3.2 and 5.2.
6. Troubleshooting

6.1 Error messages ................................................................. 6-2
6.2 Quick diagnosis ............................................................... 6-6
6.1 Error messages

This product displays error messages on the LCD when there are errors in the internal check at startup, panel operation, or remote control operation.

A display example of an error message is shown in Figure 6-1.

![Figure 6-1 Display example of error message](image)

Error messages that are not listed in this instruction manual may be displayed due to firmware update etc. If there are other manuals provided, refer to them as well.

7.5.5 Testing current-monitor accuracy ................................................................. 7-8
7.6 Calibration ............................................................................................................ 7-9
7.1 Introduction

The following maintenance items are essential for using this product under the best conditions.

- **Quick operation check:** Check if this product operates properly.
- **Performance testing:** Check if the specifications are satisfied.
- **Calibration, adjustment:** If this product is not in compliance with the specifications, NF Corporation will make the necessary adjustment or calibration to restore performance.
- **Malfunction, repairs:** When performance cannot be restored by calibration or adjustment, NF Corporation will identify the cause and location of the damage and execute repairs.

This instruction manual describes the procedures of quick operation check and performance testing.

For calibration, adjustment, or repair, contact NF Corporation or an authorized agent.

---

**WARNING**

To prevent exposure to high voltages, never open the case of this product.

Even when inspection inside this product is needed, only service engineers certified by NF Corporation should touch the inside.

7.2 Daily maintenance

If the surface of the panel or other parts becomes dirty, wipe it with a soft cloth. To remove persistent contamination, wipe with a soft cloth soaked with neutral detergent and wrung out. Do not use any organic solvents such as thinners or benzene, or any chemical cleaning cloth, as they may cause the surface finish to deteriorate, tarnish, or come off.

7.3 Storage, repacking, and transportation

This product should be stored in a location that satisfies the storage conditions (refer to “2.2.2 Installation environment”).

When repacking this product for transportation, use a box that is sufficiently strong and large enough to provide a surplus of space. To fully protect this product, fill the box with packing material that can withstand its weight.

Make sure that the package is handled with care to avoid strong shocks during transport.
7.4 Check the firmware version number

Due to product upgrades, the firmware version of each product may differ even if they are of the same model. Operation of the product may differ due to difference in versions. If any anomaly is found, inform NF Corporation of the problem along with the version number.

The latest firmware information is published on our website.

You can check the firmware version number using the startup display (Figure 7-1) or the following procedure.

[Procedure checking firmware version number]
1) Press the [MENU] key to enter the top menu.
2) Use the up and down keys to move the cursor to "UTILITY" and press the [ENTER] key.
3) Use the up and down keys to move the cursor to "FW VERSION" and press the [ENTER] key.
4) Then the LCD displays the message shown in Figure 7-2. The firmware version number is displayed in the bottom row.

```
MODEL LP6016-01
FW ver 1.00
```

Figure 7-1 Display example at startup

```

7.5 Performance testing

7.5.1 Introduction

Performance tests are conducted to check that there is no abnormality of this product. Testing is done for acceptance inspection, periodic inspections, and whenever it is necessary to check performance, such as after repair.

This section describes a test that can be conducted with general measurement instruments. Calibration is available at charge and can be requested from NF Corporation or an authorized agent.

If the performance test indicates that this product does not comply with the specifications, re-adjustment or repair is required. In such a case, contact NF Corporation or an authorized agent.

- Test conditions

This product should be tested under the following conditions.

- Temperature: 23 °C ± 5 °C
- Humidity: 20 to 70 %RH, no condensation
- Warm-up: 60 minutes or more
- Other: Before the test, initialize the settings.

Setting Initialization is to execute "INITIALIZE" for panel operation or "*RST" for remote control operation.

- Measurement instruments

The required measurement instruments are listed in Table 7-1.

</tr>
</tbody>
</table>
7.5 Performance testing

7.5.2 Testing output voltage setting accuracy

The following is how to test for positive output voltage as well as negative output voltage.

- Connect the two devices as shown in Figure 7-3.
- Set the positive output voltage to +10.0000 V and turn on the output.
- Measure the DC voltage with the digital multimeter-1.
- Refer to Table 7-2 and check that specification "±(|0.03 % of setting| + 250 μV)" is satisfied.
- Also test by setting the output voltage to 0.0000 V.

![Diagram of connection when testing voltage setting accuracy](image)

(For measurement on the negative side, make the connection shown with the broken line.)

</tr>
</tbody>
</table>
7.5 Performance testing

7.5.3 Testing line regulation

The following is how to test for positive output voltage as well as negative output voltage.

- Connect the devices as shown in Figure 7-4.
- Set the voltage of the AC power supply to AC 100 V.
  * The frequency may be either 50 or 60 Hz.
- Set the positive output voltage of LP6016-01 to +10.0000 V and turn on the output.
- Measure the DC voltage with the digital multimeter-1, which is defined as “V_{100}[V]”.
- Measure the DC voltage also with AC 90 and 110 V, which is defined as “V_{90}[V]” and “V_{110}[V]”, respectively.
- Line regulation is calculated by “V_{90} - V_{100}” or “V_{110} - V_{100}”.
- Refer to Table 7-3 and check that specification “±0.1 mV” is satisfied.

![Diagram of connection when testing line regulation](image)

(For measurement on the negative side, make the connection shown with the broken line.)

<td>__ __ __ __ __ __ mV</td>
</tr>
</tbody>
</table>
7.5.4 Testing load regulation

The following is how to test for positive output voltage as well as negative output voltage.

- Connect the devices as shown in Figure 7-5.
  Set the DC electronic load to 100 mA or use a load resistor of 100 Ω.
- Set the positive output voltage of LP6016-01 to +10.0000 V and turn on the output.
- Measure the DC voltage with the digital multimeter-1.
  The measured voltage when the load is connected is defined as $V_{100}[\text{V}]$.
  The measured voltage when the load is not connected is defined as $V_0[\text{V}]$.
- Load regulation is calculated by “$V_{100} - V_0$”.
- Refer to Table 7-4 and check that specification “± 5 mV” is satisfied.

[Caution] The load resistor (100 Ω) produces high temperature.
Be careful not to place it on melty vinyl or paper that may burn. Do not touch the load resistor directly.

7.5 Performance testing

7.5.5 Testing current-monitor accuracy

The following shows how to test for current-monitor accuracy.

- Connect the devices as shown in Figure 7-6.
- Set the positive output voltage of LP6016-01 to +10.0000 V and turn on the output.
- Set the negative output voltage of LP6016-01 to -10.0000 V and turn on the output.
- Measure the DC voltage with the digital multimeter-1, which is defined as “\( V_M[V] \)”.
- Measure the DC current with the digital multimeter-2, which is defined as “\( I_o[A] \)”.
- Current-monitor accuracy is calculated by \( \frac{I_o - (0.1 \times V_M)}{I_o \times 100} \).
- Refer to Table 7-5 and check that specification "\( \pm (1\% + 1.5 \text{mA}) \)” is satisfied.

![Diagram of connection when testing current-monitor accuracy](image)

7.6 Calibration

Although this product depends on the use environment or frequency of use, conduct "7.5 Performance testing" at least once a year. Also, when using it for important measurements and tests, it is recommended to test before use.

Calibration is available at charge and can be requested from NF Corporation or an authorized agent.

If the performance test indicates that this product does not satisfy the specifications, re-adjustment or repair is required. In such a case, contact NF Corporation or an authorized agent.

8.3 Limit function of setting output voltage

Function
- This is a function to prevent erroneous excessive voltage from being applied. The output voltage exceeding the limit voltage cannot be set.

Setting range
- + 0.000 5 to + 16.100 0 V
- - 0.000 5 to - 16.100 0 V

Setting resolution
- 500 μV

8.4 Current monitor

Output signal *8.1
- Voltage outputs with conversion gain of 1 V/100 mA.

Output terminal *8.2
- BNC receptacle connector
- Positive and negative

Output impedance
- 1 kΩ

Accuracy
- ± (1 % + 1.5 mA)
- ± (1 % + 2 mA)
- 23 °C ± 5 °C
- 0 to 50 °C
- In current equivalent, no load

*8-1: Built in low pass filter of about 300 Hz.
*8-2: The common of the voltage outputs and current monitors are the same (COM).

8.5 Power supply

Voltage
- AC 100/120/220/240 V ±10 %
- However, must not exceed AC 250 V.
- Select using “VOLTAGE SELECTOR” switch on rear panel

Frequency
- 50 /60 Hz ± 2 Hz

Power consumption
- 28 VA or lower

Overvoltage category
- II

Fuse
- Use the rated fuses listed in Table 8-1.

Table 8-1 Fuse rating

<table>
<thead>
<tr>
<th>Power supply voltage</th>
<th>Rated current</th>
<th>Rated voltage</th>
<th>Remark</th>
</tr>

*8-1: Built in low pass filter of about 300 Hz.
*8-2: The common of the voltage outputs and current monitors are the same (COM).
8.6 Interface for remote control

USB
USB2.0 full speed, device class CDC
RS-232
Connector: D-sub 9pin, male
Baud rate: Select from 4 types:
  9600, 19200, 38400, or 57600 bps
Parity: Select from 3 types:
  NONE, ODD, or EVEN
Handshake: Select from 3 types:
  NONE, SOFTWARE, or HARDWARE
Program and response message terminator: Select from 3 types:
  CR, LF, or CR LF
Data length: 8 bits
Stop bit: 1 bit
LAN
10BASE-T/100BASE-TX, TCP/IP

8.7 Others

8.7.1 Output common terminal (COM)
This terminal is connected to the output common (COM) and corresponds to the banana plug of ø4 mm. Wire of ø2.5 mm or less can also be connected.

8.7.2 Enclosure terminal (CHASSIS)
This terminal is connected to the enclosure (CHASSIS) and corresponds to the banana plug of ø4 mm. Wire of ø2.5 mm or less can also be connected.

8.7.5 Protection function

Over current protection  Drooping characteristic (about 150 mA, self recovery type)
Over current indication  "OCP" is displayed and flashes (when output current exceeds about 100 mA)
Over heat protection  Outputs are turned off when an internal temperature exceeds the threshold
Over heat indication  "OHP" is displayed and flashes

8.7.6 Setting of power on

At power-on, each setting condition will be the same as that when powered off last time.
However, only the output ON/OFF state is selectable by the following setting.
Always ON/Always OFF/Last state

8.7.7 Environmental conditions

Altitude  2000 m or lower
Operating temperature range  0 to +50 °C
Operating humidity range  5 to 85 %RH, absolute humidity 1 to 25 g/m³, non-condensation
Storage temperature range  -10 to +60 °C
Storage humidity range  5 to 95 %RH, absolute humidity 1 to 29 g/m³, non-condensation
Cooling method  Natural convection cooling
Pollution degree  2 (indoor use)
Warm-up time  60 minutes

8.7.8 Dimensions and weight

Dimensions (W×H×D)  215 × 86 × 330 mm (without protrusions)
Weight  Approx. 3.5 kg (without accessories)

8.7.9 Standards

Figure 9-1 Output noise voltage density frequency characteristics
9.3 Time stability

The time stability of the output voltage after 60 minutes of warm-up is shown in Figure 9-2, which shows the characteristics of positive voltage output. The negative voltage output has the same characteristics.

Conditions: +16.1000 V, 100 mA, ambient temperature within 23 °C ± 3 °C

Figure 9-2 Time stability
9.4 Temperature coefficients

The temperature coefficients of the output voltage are shown in Figure 9-3 and Figure 9-4. The vertical axes in the figures are the normalized values at ambient temperature (23 °C).

Conditions: ± 16.1000 V, no load
WARRANTY

NF Corporation certifies that this product was thoroughly tested and inspected and found to comply with its published specifications when it was shipped from our factory. In the unlikely event that you experience an issue during use, please contact our company or an authorized agency from which you purchased the product.

All NF Corporation products are warranted against defects in materials and workmanship for a period of one year from the date of shipment. During the warranty period, NF Corporation will repair the defective product without any charge for the parts and labor.

For repair service under warranty, the product must be returned to either NF Corporation or an authorized agent. The Purchaser shall prepay all shipping costs, duties, and taxes for the product to NF Corporation from another country, and NF Corporation shall pay shipping charges to return the product to the purchaser.

This warranty shall not apply when corresponding to the following particulars.

A) Failure caused by improper handling or use of the product in a manner that does not conform with the provisions of the Instruction Manual.
B) Failure or damage caused by transport, dropping, or other handling of the product after purchase.
C) Failure caused by repair, adjustment, or modification of the product by a company, organization, or individual not approved by NF Corporation.
D) Failure caused by abnormal voltage or the effect of equipment connected to this product.
E) Failure caused by the effect of supply parts from the customer.
F) Failure caused by such as corrosion from the use of caustic gases, organic solvents, and chemicals.
G) Failure caused by insects or small animal that invaded from the outside.
H) Failure or damage caused by fire, earthquakes, flood damage, lightning, war, or other uncontrollable events.
I) Failure caused by unforeseen reasons due to the limits of the technology when shipped from our company.
J) Replacement and replenishment of consumables such as batteries.

NF Corporation

Request for Repair

When a failure occurred and the product was found to be defective or you have any uncertainty, please contact NF Corporation or an authorized agent.

In such a case, let us know the model name (or product name), serial number (SERIAL No. given on the nomenclature plate), and symptoms and operating conditions in as much detail as possible.

Though we will make efforts to reduce the repair period, when five or more years have passed since you purchased the product, it may take time due to, for instance, repair parts being out of stock.

Also, if the production of repair parts is discontinued, the product is seriously damaged, or the product is modified, we may decline the repair.
If there are any misplaced or missing pages, we will replace the manual. Contact a sales representative.

NOTES

- Reproduction of the contents of this manual is forbidden by applicable laws.
- The contents of this manual may be revised without notice.
- Information provided in this manual is intended to be accurate and reliable. However, we assume no responsibility for any damage regarding the contents of this manual.
- We assume no responsibility for influences resulting from the operations in this manual.
